

MRT Introduces Drone Management System For 2015 Mustang Catback Exhaust Systems

For Immediate Release

Plymouth Michigan- MRT is proud to announce their new Drone Management System for 2015 Mustang fastback models. The engineers at MRT know that it is not good enough to have aggressive exhaust systems on the market, so they designed, engineered and manufactured the new system to control any resonance caused by the exhaust system.

The result is a deep throaty exhaust note that allows 2015 Mustang owners to ride comfortably while enjoying the high performance sounds from their 5.0L Coyote engine.

The [MRT Catback exhaust with the Drone Management System](#) does not require any modifications to the 2015 Mustang GT Fastback. The new system is also available with a sinister black Cerakote finish for the tips. The Cerakote finish is heat resistant and covered the MRT LIMITED LIFETIME Warranty.

Like all MRT exhaust systems, the Drone Management System is manufactured at the MRT facility in Plymouth, Michigan using high quality 304 Stainless Steel.

MRT headquarters is located in Plymouth, Michigan and is a performance engineering, customization and sales company that specializes in automotive exhaust, styling and performance.
